EXPERIENCE SUMMARY:

Since March of 2003, Mr. Hart has been a project engineer with Marathon Engineering and Environmental Services, Inc. providing consulting engineering services on a variety of residential, commercial, industrial and institutional land development projects. His broad land development experience includes feasibility investigation, site planning and engineering, stormwater management systems utilizing Best Management Practices (BMPs), hydrologic/hydraulic studies, utility investigation, sanitary collection/conveyance and water distribution system design, roadway design, and soil erosion and sediment control design. Mr. Hart's responsibilities include project management, engineering investigation and design, submission and coordination of projects with local and county land use boards and State regulatory agencies, and preparation of bid and construction documents.
